

Drawing inspiration from nature, Earthos embraces rustic earthiness ... both in texture, material choice and color palette. As shown in the Segorbe series by **Tile of Spain** branded manufacturer **Grespania**, this trend holds an appreciation for

the use of recycled materials and organic tones. Style stemming from Earthos includes the minimalism offered by cement and metal, coupled with natural elements such as stone, moss, grass and bark.

CaesarStone presents Motivo, a new pattern-designed technique for its quartz surfaces. Motivo is another groundbreaking innovation from the company that pioneered the use of quartz in surfacing material more than two decades ago. To create Motivo, CaesarStone uses a unique patented polishing method to create a contrasting gloss and matte finish on its quartz surfaces. The stunning, intricate motifs add character and style to any décor.

Surfacing

MATERIALS

Advanced Technology Inc. (ATI) introduces the additional capabilities of

FusionTech to its wide range of product offerings. Through a proprietary process, ATI now has the ability to create custom, durable products on multiple substrates, including metal, glass, FRP, ceramic, and wood. No project is too small or too large as the flexibility of FusionTech is one of its greatest attributes.

Urban
Renewal by

Crossville combines the beauty of real metal accent and trim pieces with a dimensional composite body, which means that although it has the look of heavy metal, it's actually lightweight and easy to install. And, in keeping with its name, Urban Renewal is made of 60 percent post-consumer recycled content (certification pending).
